

ABSTRACT OF THE DISCLOSURE

A recording tape cartridge in which, even if impact is applied to a vicinity of an opening of a case due to a drop or the like, a leader pin does not fall out from pin holding portions. The recording tape cartridge has a case which is substantially rectangular, and at which an upper case and a lower case formed of synthetic resin are joined together with peripheral walls thereof abutting one another, and which rotatably accommodates a single reel on which a recording tape is wound; an opening, formed at a corner portion of the case at a side of loading the case into a drive device, for pulling-out of a leader pin attached to an end portion of the recording tape; and pin holding portions formed at an inner surface of the upper case and an inner surface of the lower case, and holding the leader pin in a vicinity of the opening. A draft of a ridge line portion of the case in a vicinity of the opening is 1° or less.
